INTRODUCTION

Our selection of internal steel doors is the ideal choice for any indoor space. Our extensive collection includes everything from fixed screens and double doors to sliding and single doors. These doors not only enhance the ambiance with their high-end finish but also offer a touch of luxury at a cost-effective price, arguably making them the best available in the UK.

INTRODUCTION

Our range of doors and fixed screens is perfectly suited for homes of all styles, from classic to contemporary, adding a touch of luxury to every property. Crafted by hand using cold-rolled steel, our doors boast some of the thinnest profiles on the market, customised to fit the unique needs of each project. Designed for elegance and efficiency, they enhance natural light flow and occupy minimal space, contributing to a sense of openness in any home setting.

The frames are some of the slimmest available at only 50mm from front to back and 20mm wide. The glazing bars are only 15mm.

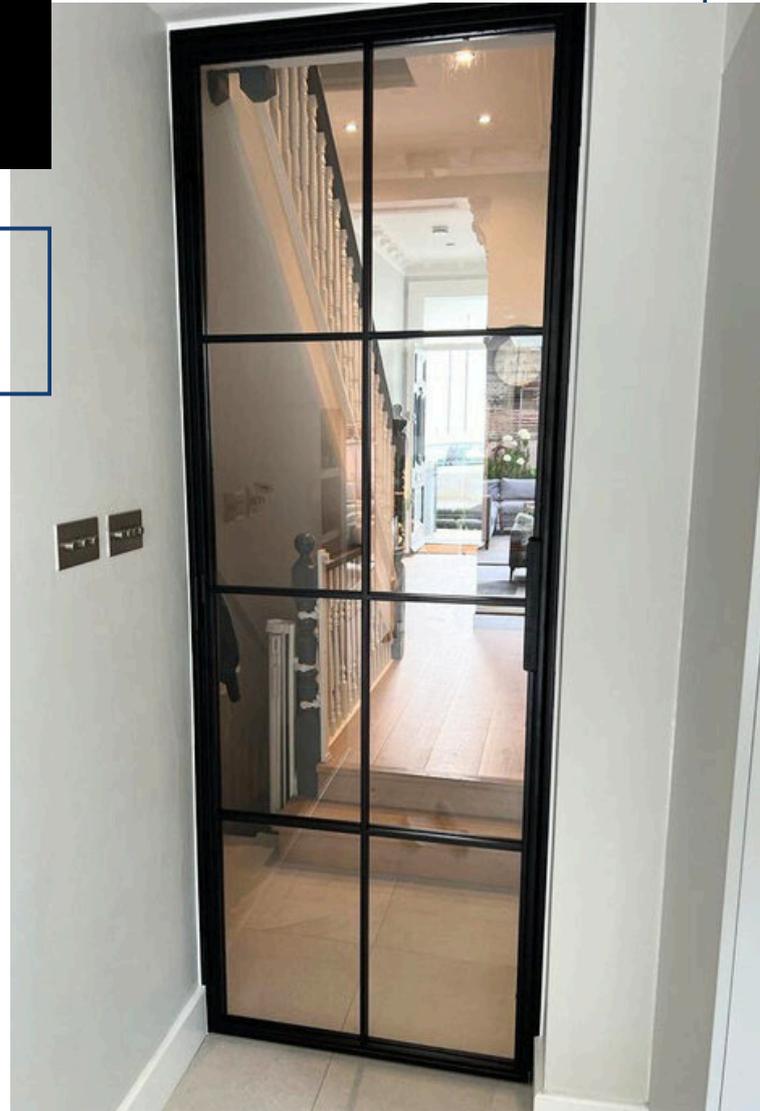

Using these doors instead of walls or solid doors not only allows light to flow between spaces. They also reduce the need for lighting and can create a degree of sound proofing between spaces. With our obscure glass options they can provide light and privacy. For example in an en suite bathroom.

DOOR TYPES

Single Hinged Door

These can be made with or without fixed panels at the sides. In some situations double doors are not practical. For example, if the space is a bit narrow a single door with a glazed side panel can be a better option. It will still allow a flow of light between the rooms.

Double Hinged Doors

Again, if you have a large space these French doors can be fitted with side screens on one or both sides. They have 180 degree hinges which means the doors can be opened fully back to the side screens.

DOOR TYPES

Sliding and Pocket Doors

These are a great way to create light between rooms that have limited space. They can slide into a wall (pocket doors) or they can slide over a fixed glazed section. You can have single or double sliding doors.

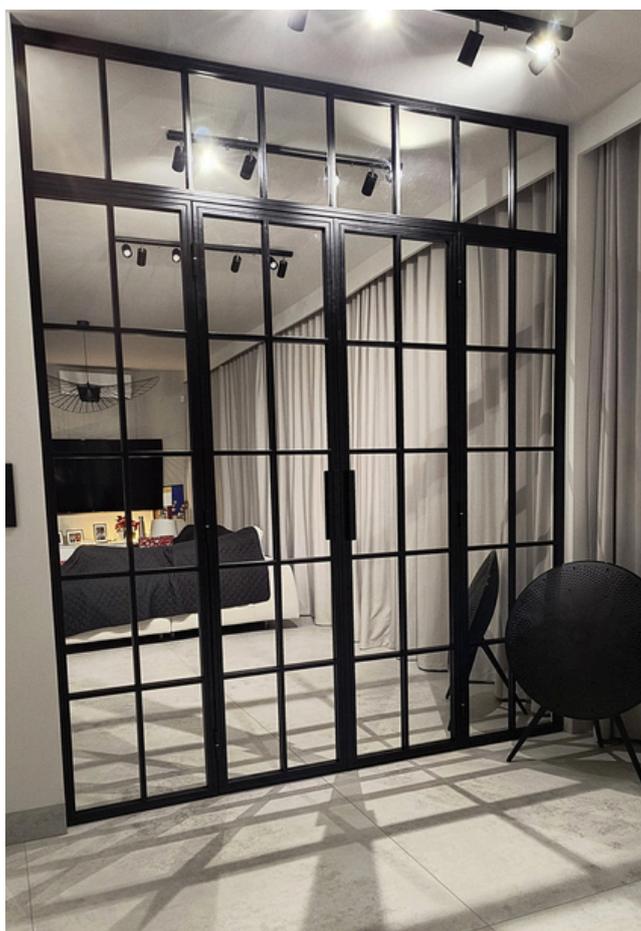

COLOURS

95% of our steel doors are ordered in Black but we can make them in any RAL colour. White is the second most popular and for an extra touch of opulence we can spray them in bronze.

GLASS OPTIONS

Clear

Glass

This is a popular choice for its ability to allow maximum light flow between rooms. Its transparency contributes to an increased sense of depth and can significantly elevate the visual appeal of any interior. This type of glass helps in creating a harmonious and visually attractive space.

Reeded

Glass

Reeded glass is favoured in interior design for its numerous advantages. Its textured design ensures privacy while still permitting light entry. The texture plays a role in softening and diffusing light, thus reducing glare and fostering a more inviting atmosphere. Moreover, reeded glass is both sturdy and easy to maintain, which is particularly beneficial in areas with high foot traffic or where regular cleaning is a must.

Opaque

Glass

Opaque glass is also a preferred choice in interior design for its combination of features. It's sometimes called satin or frosted. Its translucent nature maintains maximum privacy while allowing light to filter through, ideal for spaces like bathrooms, bedrooms, or meeting rooms where privacy is key. Additionally, its frosted appearance adds a sophisticated and elegant aesthetic to any setting.

HANDLE OPTIONS

We have several handle options with hinged doors – a traditional mortice latch handle, trim handle or pull handle.

Sliding doors could be with trim handle, pull handle or pocket handle.
